The eggs you buy at the store come from a small dinosaur that is still in the summarily deeming that this is the first chicken or the first egg.

Because OC is expressed by the hen and not the egg, the bird in which the protein first arose, though having hatched from a non-reinforced egg, would then have laid the first egg having such a reinforced shell: the chicken would have preceded this first modern chicken egg. Ancient paradox - Scientific resolutions.

Now You Know: Which Came First, the Chicken or the Egg? That answer is also trueâ€”the egg comes firstâ€”when you narrow it down to. Plutarch was the first person to describe the chicken-and-egg problem, writing in his Which came first, actual chickens or actual eggs?.

That one zygote cell divided to produce the first true chicken. Prior to that first true chicken zygote, there were only non-chickens. The zygote cell is the only place where DNA mutations could produce a new animal, and the zygote cell is housed in the chicken's egg. So, the egg must have come first.
